Weekly Coal Production

Production for Week Ended:
November 28, 1987

Highlights

U.S. coal production in the week ended November 28, 1987, as estimated by the Energy Information Administration, totaled 16.0 million short tons (bituminous coal and lignite, nearly 16.0 million short tons; Pennsylvania anthracite, .04 million short tons). This was 19.9 percent lower than production in the previous week, primarily east of the Mississippi, due to the Thanksgiving holiday and was 10.1 percent higher than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through November 28, 1987, was estimated at 833.0 million short tons, 2.0 percent above the 816.7 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
